

THE UNIVERSITY OF  
MELBOURNE

# Marketing Research

Week 4

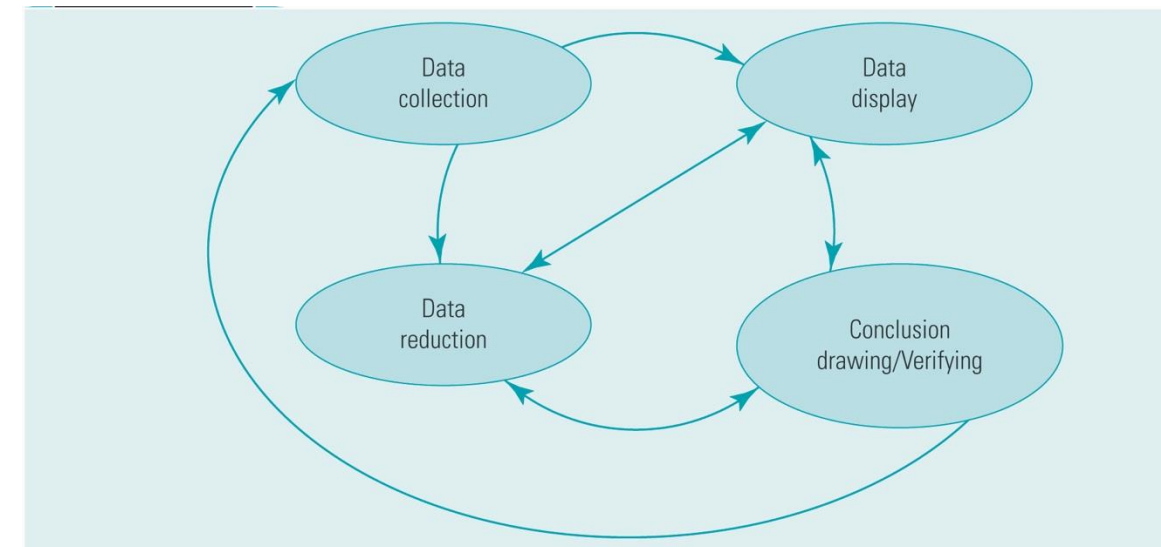

# Recap: Exploratory Research

**Qualitative research** is mostly used to gain an understanding of why certain things happen. It can be used in an exploratory context by defining problems in more detail or by developing hypotheses to be tested in subsequent research.

- Focus groups
- Depth interviews
- Projective techniques
- Observational studies
- Ethnographies

Source: Matthew B. Miles & A. Michael Huberman, *Qualitative Data Analysis: An Expanded Sourcebook*, Sage Publications, Thousand Oaks, CA, 1994, p. 12.

# Housekeeping – Group Project

1. Determine your research questions.
2. Work on literature review and research secondary data.
3. Decide one (or two) qualitative research methods to collect qualitative data.
  - Groups of 4: 10 informants
  - Groups of 5: 12 informants
  - Use the interview guide (~30 min) and focus group guide in W3 (Reference) as templates.
  - Keep evidence of data collection (e.g., scripts or recordings)
4. Revisit/revise your RQ if needed (e.g., if your qualitative data show something more interesting)
5. Based on your qualitative data, design a questionnaire (25 survey questions)
6. Upload your questionnaire to Canvas in W6 (more details will follow after we talk about Qualtrics)

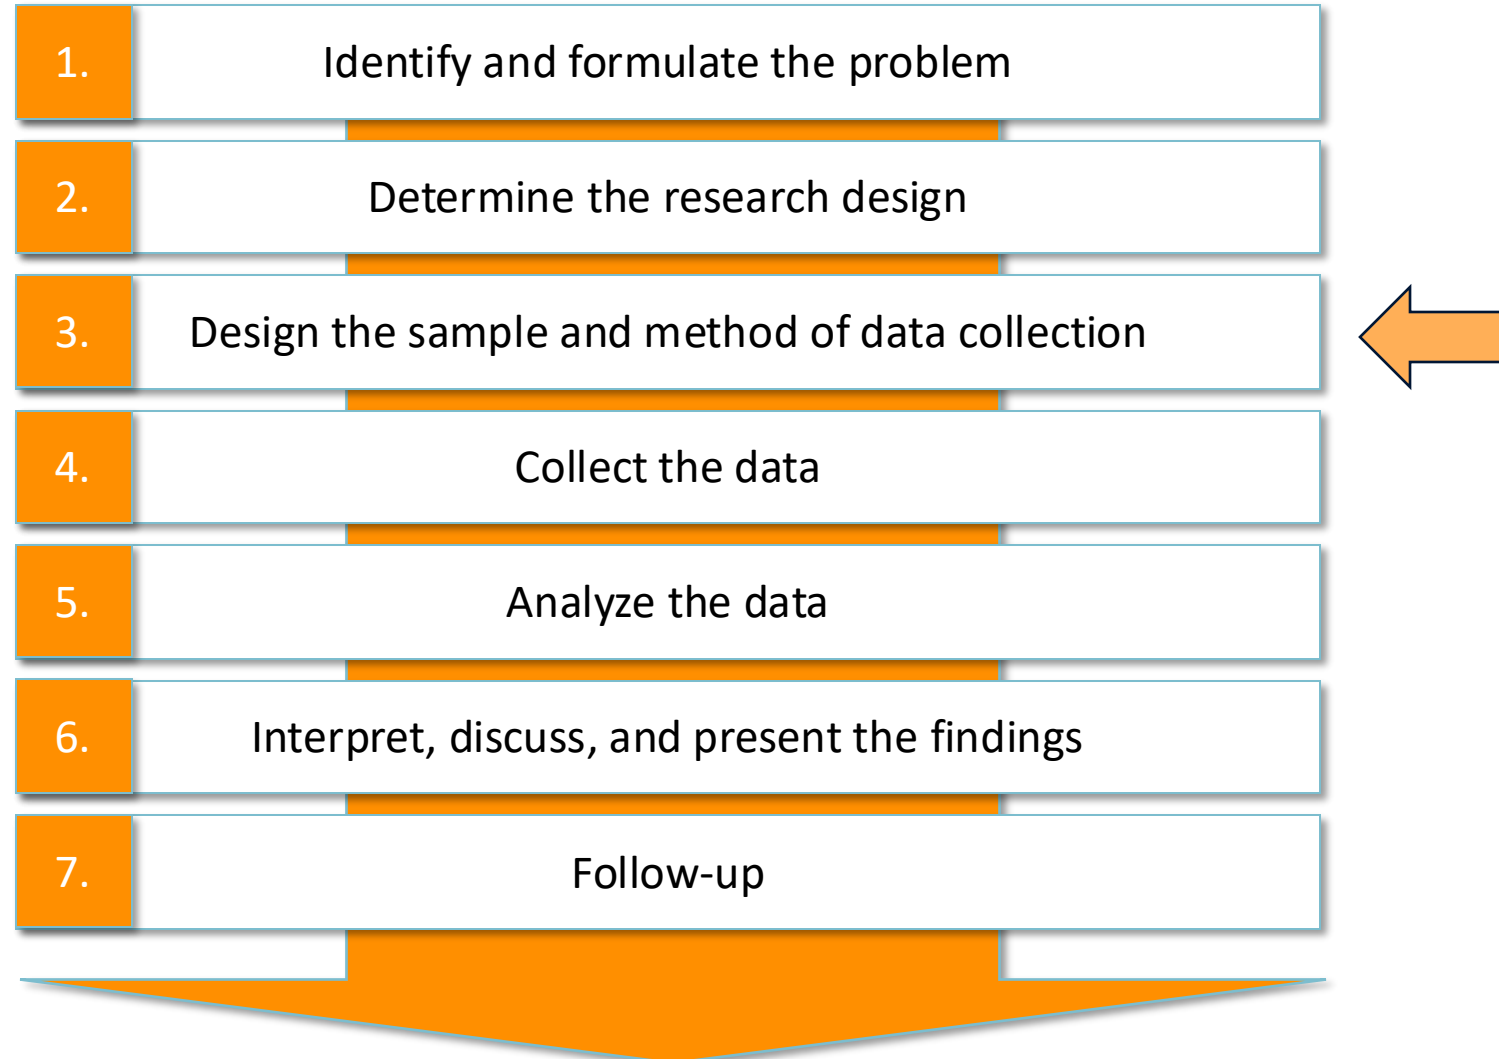

# Topics for today

1. Measurement scaling
2. Comparative and non-comparative scales
3. Single vs. Multiple Item scales
4. Questionnaire design
5. Qualtrics (if time permits)

# Measurement Scaling

# The Market Research Process

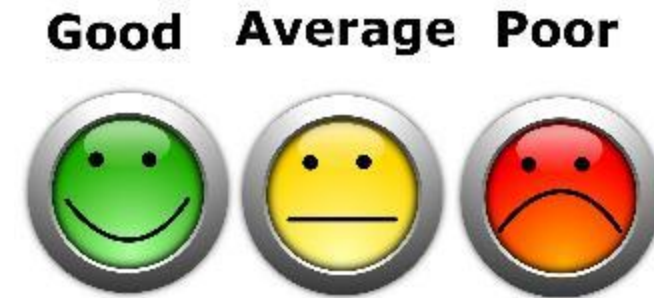

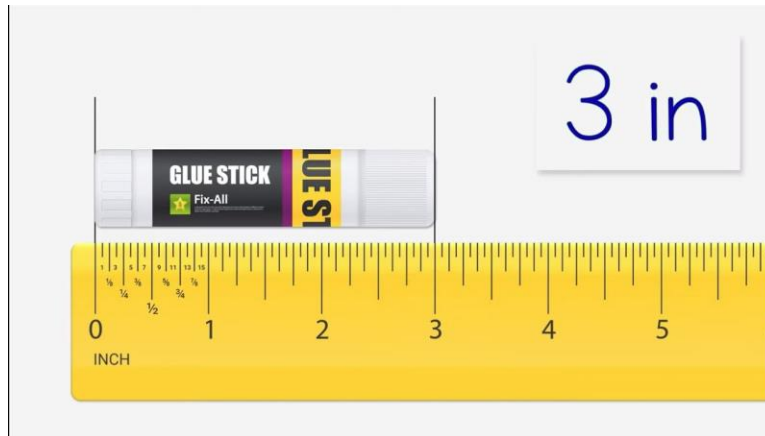

# Measurement

Assigning numbers or other symbols to characteristics of objects according to certain pre-specified rules.

- One-to-one correspondence between number and characteristics
- Rules for assigning numbers should be standardized (everyone uses the same scale to measure the same object should give you the same answer)
- Four scale types are commonly used: **nominal, ordinal, interval, and ratio**

# Measurement Scaling

Four levels of measurement scales

1. **Nominal**
2. **Ordinal**
3. **Interval**
4. **Ratio**

The level of measurement scales determine

☐ Information level obtained

- Nominal scales measure the lowest information level, ratio scales provide the greatest amount of information

☐ Level of statistical analysis

- Nominal scales allow simple analyses, ratio scales allow more sophisticated analyses

# Nominal scales

- Scales that only label objects and do NOT provide information about ordering

## *Examples*

Q. What is your occupation?

- 1) Digital marketer
- 2) Sales person
- 3) SEO specialist
- 4) Other

Q. Have you visited Facebook in the past week?

- 1) Yes
- 2) No

# Nominal scales

- Open-ended questions can also be coded into multiple nominal scale variables

## ***Example***

Q. How do you like TikTok?

A. *"I love Tiktok! It's more fun and flashy than other social media! Tho it takes some time to adjust to its format All of my friends under 25 love it tho!"*

- Love TikTok (1)
- More fun and flashy than competitors (2)
- Takes some time to adjust (3)
- Friends under 25 love it (4)

# Ordinal scales

- Allow researchers to rank-order subjects' answers
- Enable us to know if the value of that variable increases, or decreases
- We do not know if the differences in the order are equally spaced

## Examples

Q. How would you describe your usage of Facebook?

1. Non-user
2. Infrequent user
3. Regular user

Q. What is your highest level of education?

1. No formal education
2. Primary school
3. Secondary school
4. Vocational education (TAFE)
5. University bachelor's degree
6. University postgraduate degree (master's, PhD)

Q. What is your approximate annual income? (before tax)

1. Less than \$20,000
2. \$20,000 - \$40,000
3. \$40,001 - \$60,000
4. \$60,001 - \$80,000
5. \$80,001 - \$100,000
6. More than \$100,000

Q. Please rank the following social media platforms based on your preference (1 = most favored, 3 = least favored)

1. Facebook
2. TikTok
3. Instagram

# Interval scales

- Each value on the scale is assumed to be an ***equal distance*** apart
- We can interpret the magnitude of the differences in values directly
- The location of the zero point is not fixed but arbitrary (e.g., temperature in Celsius) → no absolute “0”
- Descriptors are sometimes placed evenly apart on the questionnaire to indicate interval

## Examples (Likert Scales)

Q. How satisfied are you with Facebook's customer service?

1. Extremely Dissatisfied
2. Very Dissatisfied
3. Moderately Dissatisfied
4. Neither Satisfied nor Dissatisfied
5. Moderately Satisfied
6. Very Satisfied
7. Extremely Satisfied

To what extent do you agree with the following statements:

|                                                                                | Strongly disagree     | Disagree              | Somewhat disagree     | Neither agree nor disagree | Somewhat agree        | Agree                 | Strongly agree        |
|--------------------------------------------------------------------------------|-----------------------|-----------------------|-----------------------|----------------------------|-----------------------|-----------------------|-----------------------|
| Generally speaking, the higher the price of a product, the higher the quality. | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/>      | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| The old saying "you get what you pay for" is generally true.                   | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/>      | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| The price of a product is a good indicator of its quality.                     | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/>      | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| You always have to pay a bit more for the best.                                | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/>      | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |

# Ratio scales

- There is an absolute “0” in the scale that is meaningful (a value of 0 means that particular variable is not present)
- Provide the most information

## *Examples*

Q. How many friends/followers do you have? \_\_\_\_

Q. How many pages have you followed? \_\_\_\_

Q. Please indicate your annual income (before tax) \$\_\_\_\_

Q. Please indicate your age \_\_\_\_ years old

# Measurement scaling

|                | Label | Order | Differences | Origin is 0 |                                       |
|----------------|-------|-------|-------------|-------------|---------------------------------------|
| Nominal scale  | ✓     |       |             |             | Non-metric /<br>Categorical<br>scales |
| Ordinal scale  | ✓     | ✓     |             |             |                                       |
| Interval scale | ✓     | ✓     | ✓           |             | Metric /<br>Quantitative<br>scales    |
| Ratio scale    | ✓     | ✓     | ✓           | ✓           |                                       |

# Comparative and non-comparative scales

# Overview of Types of Scales

## Comparative Scales

- Paired comparison
- Rank order
- Constant sum

## Non-comparative Scales

- Continuous rating
- Likert scale
- Semantic differential

## Innovative Scales

# Comparative scales

## ☐ Paired comparison - Present two objects at a time

Please select the social media platform in each pair that you are more likely to visit in your visit of social media:

|           |                                                      |           |
|-----------|------------------------------------------------------|-----------|
| Facebook  | <input type="checkbox"/> or <input type="checkbox"/> | YouTube   |
| YouTube   | <input type="checkbox"/> or <input type="checkbox"/> | Instagram |
| Instagram | <input type="checkbox"/> or <input type="checkbox"/> | Facebook  |

## ☐ Rank order - Present all objects simultaneously, Ask subjects to rank them based on some criterion

Please rank the following stores based on your attitude towards them (1 = most positive; 4 = least positive):

|           |                          |
|-----------|--------------------------|
| Facebook  | <input type="checkbox"/> |
| YouTube   | <input type="checkbox"/> |
| Instagram | <input type="checkbox"/> |
| TikTok    | <input type="checkbox"/> |

# Comparative scales

❑ **Constant sum** - Ask subjects to allocate a constant sum of units (points, dollars) to a set of objects

Please allocate 100 points among the stores such that the allocation represents your satisfaction with the store. The more points a store receives, the more satisfied you are with the store.

|              |                   |
|--------------|-------------------|
| Facebook     | _____             |
| YouTube      | _____             |
| Instagram    | _____             |
| TikTok       | _____             |
| <b>Total</b> | <b>100 points</b> |

# Non-comparative scales

- ❑ **Visual analogue scales** – Subjects rate an object by marking a line running from one extreme to another extreme on a criterion variable

How high are your expectations that...

Very low      0      10      20      30      40      50      60      70      80      90      Very high  
100

... with Oddjob Airways you will arrive on time.

☐ Not Applicable

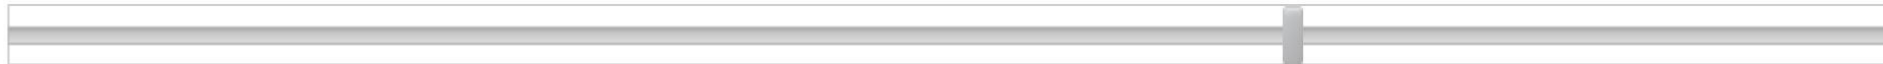

... the entire journey with Oddjob Airways will occur as booked.

☐ Not Applicable

... in case something does not work out as planned, Oddjob Airways will find a good solution.

☐ Not Applicable

# Non-comparative scales

- ☐ **Likert scales (Rensis Likert)** – Ask subjects to indicate a degree of agreement or disagreement with a statement about an object (usually five, seven, or nine points)

Please indicate the extent to which you agree or disagree with the following statements?

| Statement                            | Strongly agree           | Agree                    | Neither agree or disagree | Disagree                 | Strongly disagree        |
|--------------------------------------|--------------------------|--------------------------|---------------------------|--------------------------|--------------------------|
| I love to watch cat videos           | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/>  | <input type="checkbox"/> | <input type="checkbox"/> |
| I always look for for dog training   | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/>  | <input type="checkbox"/> | <input type="checkbox"/> |
| I enjoy seeing new cute animal pages | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/>  | <input type="checkbox"/> | <input type="checkbox"/> |

- ☐ **Semantic Differential scales** – Use bipolar adjectives or adverbs at the endpoints of a continuum

Please select the response that best describes how your feel about Costco?

|          |                          |                          |                          |                          |                          |            |
|----------|--------------------------|--------------------------|--------------------------|--------------------------|--------------------------|------------|
| Positive | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | Negative   |
| Like it  | —                        | —                        | —                        | —                        | —                        | Dislike it |
| Reliable | 1                        | 2                        | 3                        | 4                        | 5                        | Unreliable |

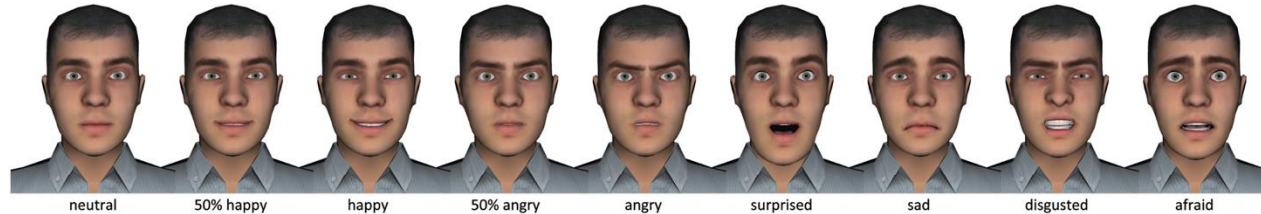

# Innovative scales

Combined Emotions

# Classification of Scaling Techniques

# Scale Examples - Marketing

## EXHIBIT 11.10 Different forms of comparative rating scales used in marketing research

### A. Rank-order rating scale

Thinking about the different types of music, please rank your top three preferences of types of music you enjoy listening to. Write in your first preference, second preference and third preference on the lines provided below.

First preference: \_\_\_\_\_

Second preference: \_\_\_\_\_

Third preference: \_\_\_\_\_

### B. Paired-comparison rating scale\*

We are going to present you with several pairs of traits associated with a salesperson's on-the-job activities. For each pair, please circle the trait you feel is more important of the two in the job of being a salesperson.

- |                         |                           |
|-------------------------|---------------------------|
| a. trust                | b. competence             |
| a. trust                | b. communication skills   |
| a. trust                | b. personal social skills |
| a. competence           | b. communication skills   |
| a. competence           | b. personal social skills |
| a. communication skills | b. personal social skills |

### C. Constant sums rating scale

Below is a list of seven banking features. Please allocate 100 points among the seven features, such that each allocation represents the importance of each feature in selecting 'your' bank. The more points you assign to a feature, the more important that feature was to your selection process. If the feature was 'not at all important' in your process, you should not assign it any points. When you have finished, please check to ensure your total adds to 100.

| Banking features               | Number of points |
|--------------------------------|------------------|
| Convenience/location           | _____            |
| Banking hours                  | _____            |
| Good service charges           | _____            |
| The interest rates on loans    | _____            |
| The bank's reputation          | _____            |
| The interest rates on savings  | _____            |
| Bank's promotional advertising | _____            |
| Banking hours                  | _____            |
| TOTAL                          | 100 points       |

\*The researcher should scramble and reverse the order of these paired comparisons to avoid possible order bias.

For each of the following banking traits/features, please tick the one line that best expresses your impression of that feature as it relates to the bank. Make sure you give only one response for each listed feature.

|                           | Very                     | Moderately               | Slightly                 | Neither one<br>nor the other | Slightly                 | Moderately               | Very                     |                                   |
|---------------------------|--------------------------|--------------------------|--------------------------|------------------------------|--------------------------|--------------------------|--------------------------|-----------------------------------|
| Courteous employees       | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/>     | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | Discourteous employees            |
| Helpful staff             | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/>     | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | Unhelpful staff                   |
| Unattractive exterior     | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/>     | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | Attractive exterior               |
| Competitive rates         | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/>     | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | Non-competitive rates             |
| Limited service offerings | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/>     | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | Wide variety of service offerings |
| Good operating hours      | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/>     | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | Bad operating hours               |
| High-quality service      | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/>     | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | Low-quality service               |
| Unreliable                | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/>     | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | Reliable                          |
| Successful bank           | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/>     | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | Unsuccessful bank                 |
| Makes you feel at home    | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/>     | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | Makes you feel uneasy             |

# More Scale Examples - Marketing

■ **EXHIBIT 11.7** Example of behaviour intention scale for determining attendance at an arts centre

Now thinking about the next six months, we would like to know the extent to which you would consider attending various types of entertainment/performing arts events if held at the arts centre.

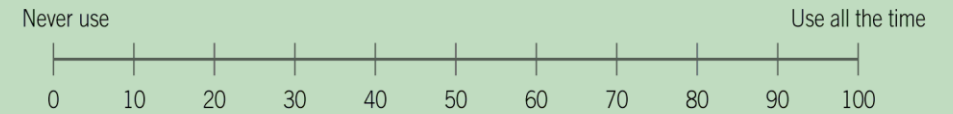

Next to each type of event, please tick the one box that best expresses the extent to which you would consider attending within the next six months. (Please tick only one box for each event.)

| Type of event                     | Definitely would consider attending | Probably would consider attending | Probably would not consider attending | Definitely would not consider attending |
|-----------------------------------|-------------------------------------|-----------------------------------|---------------------------------------|-----------------------------------------|
| <b>I. Music concerts</b>          |                                     |                                   |                                       |                                         |
| Popular music                     | <input type="checkbox"/>            | <input type="checkbox"/>          | <input type="checkbox"/>              | <input type="checkbox"/>                |
| Jazz music                        | <input type="checkbox"/>            | <input type="checkbox"/>          | <input type="checkbox"/>              | <input type="checkbox"/>                |
| Country music                     | <input type="checkbox"/>            | <input type="checkbox"/>          | <input type="checkbox"/>              | <input type="checkbox"/>                |
| Blues music                       | <input type="checkbox"/>            | <input type="checkbox"/>          | <input type="checkbox"/>              | <input type="checkbox"/>                |
| Classical music                   | <input type="checkbox"/>            | <input type="checkbox"/>          | <input type="checkbox"/>              | <input type="checkbox"/>                |
| Chamber music                     | <input type="checkbox"/>            | <input type="checkbox"/>          | <input type="checkbox"/>              | <input type="checkbox"/>                |
| <b>II. Theatrical productions</b> |                                     |                                   |                                       |                                         |
| Drama                             | <input type="checkbox"/>            | <input type="checkbox"/>          | <input type="checkbox"/>              | <input type="checkbox"/>                |
| Comedy                            | <input type="checkbox"/>            | <input type="checkbox"/>          | <input type="checkbox"/>              | <input type="checkbox"/>                |
| Melodrama                         | <input type="checkbox"/>            | <input type="checkbox"/>          | <input type="checkbox"/>              | <input type="checkbox"/>                |
| Musical                           | <input type="checkbox"/>            | <input type="checkbox"/>          | <input type="checkbox"/>              | <input type="checkbox"/>                |
| <b>III. Dance productions</b>     |                                     |                                   |                                       |                                         |
| Classical dance                   | <input type="checkbox"/>            | <input type="checkbox"/>          | <input type="checkbox"/>              | <input type="checkbox"/>                |
| Modern dance                      | <input type="checkbox"/>            | <input type="checkbox"/>          | <input type="checkbox"/>              | <input type="checkbox"/>                |
| Jazz                              | <input type="checkbox"/>            | <input type="checkbox"/>          | <input type="checkbox"/>              | <input type="checkbox"/>                |
| Folk dance                        | <input type="checkbox"/>            | <input type="checkbox"/>          | <input type="checkbox"/>              | <input type="checkbox"/>                |

■ **EXHIBIT 11.9** Different forms of non-comparative rating scales used in marketing research

## A. Graphic rating scales

Usage (quantity) descriptors:

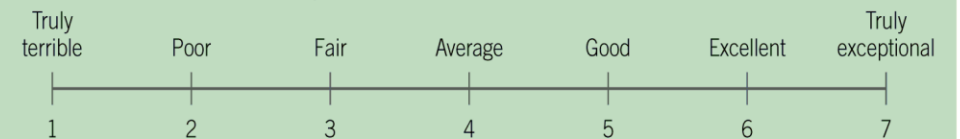

Smiling face descriptors:

## B. Performance rating scales

Performance level descriptors:

Letter grade descriptors:

## C. Staple scales

|    |    |    |    |    |                           |    |    |    |    |    |
|----|----|----|----|----|---------------------------|----|----|----|----|----|
| -5 | -4 | -3 | -2 | -1 | Good km/L rating          | +1 | +2 | +3 | +4 | +5 |
| -5 | -4 | -3 | -2 | -1 | Understands service needs | +1 | +2 | +3 | +4 | +5 |
| -5 | -4 | -3 | -2 | -1 | Competitively priced      | +1 | +2 | +3 | +4 | +5 |

# Single vs. Multiple item scales

# Single vs. Multiple Item Scales

## **Decision to use single vs. multiple-item depends on:**

- Type of variables to be measured (concrete vs. abstract)
- Survey method
- Analysis method

## **Compared to multiple item scales, single item scales ...**

- make measurement more efficient and the questionnaire shorter
- reduce the quality of your measures

# Single vs. Multiple Item Scales

**Single item scales** – ex. purchase intention

How likely are you to buy this product?

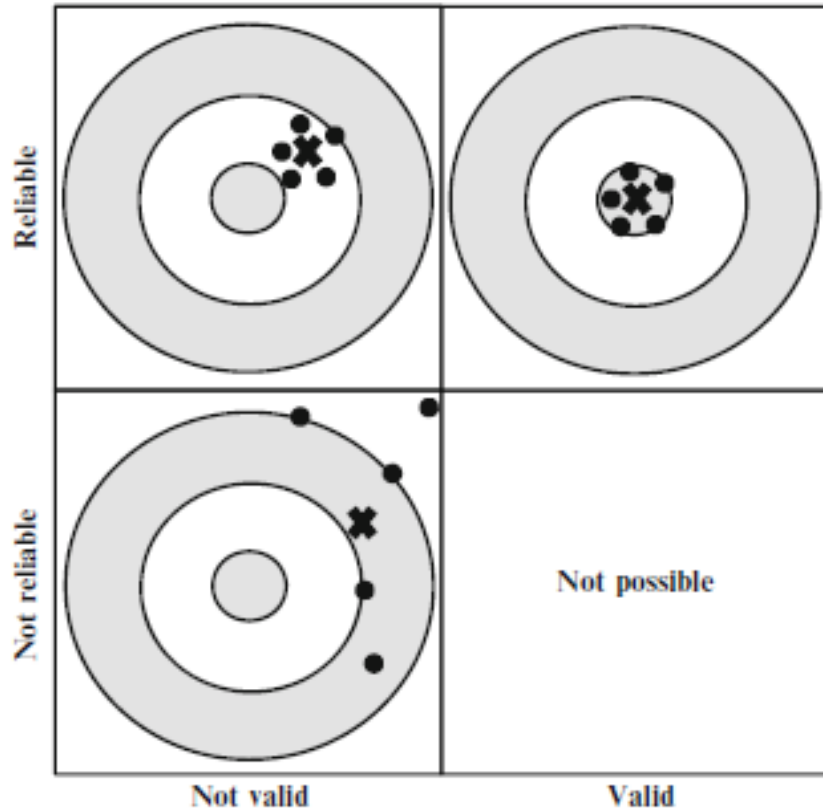

|               |   |   |   |   |   |             |
|---------------|---|---|---|---|---|-------------|
| Very unlikely | 1 | 2 | 3 | 4 | 5 | Very likely |
|---------------|---|---|---|---|---|-------------|

**Multiple item scales** – ex. *brand loyalty*

Q. To what extent do you agree with the following statements? (1 = extremely disagree, 7 = extremely agree)

- a. After I get used to a brand, I don't like to switch.
- b. I see myself as a brand loyal person.
- c. I feel really committed to the brands I buy.
- d. Even though certain products are available in a number of different brands, I always tend to buy the same brand.
- e. I prefer the brand I always buy instead of trying something new I am not sure about.

# Multiple item scales - reliability

True score model:  $X_O = X_T + E_S + E_R$

- $X_O$  = the observed score
- $X_T$  = the true score
- $E_S$  = systematic error
- $E_R$  = random error

## Reliability

- The degree to which what we measure is free from random error ( $E_R=0$ )

## Validity

- Whether we are measuring what we want to measure ( $E_S=0$ )

## Generalizability

- The extent to which one can generalize from the observations at hand to a universe

# Multiple item scales - reliability

## 3 key factors to assess reliability

### ☐ Internal consistency

- Can be used when using multiple items to measure a construct
- If these measures relate strongly and positively to one another there is a considerable degree of internal consistency
- **Cronbach's alpha** – The coefficient ranges from 0 to 1. A coefficient level should be **at least  $\geq 0.60$**  in order to be considered reliable.

### ☐ **Stability of the measurement (test-retest reliability)**

- The extent to which a scale produces consistent results if repeated measurements are made over time
- Only can be assessed for variables that are relatively stable over time

### ☐ **Inter-rater reliability**

- Assess the reliability of secondary data or qualitative data

# Questionnaire Design

Week 4

---

# Functions of a Questionnaire

- Translates research objectives into specific questions
- Standardizes questions so that each respondent is asked the same way
- A well-designed questionnaire fosters cooperation and encourages respondents to complete the survey

# How to Develop a Questionnaire

## Guidelines

- What should be asked?
- How to phrase a question?
- How to organize the questions?
- What is the layout of the questionnaire?
- How to pre-test a questionnaire?

# What should be asked?

**Step 1:** Start with the research objectives which require descriptive research

**Step 2:** Determine the variables to be measured

**Step 3:** Determine the scale to be used

Example:

- Research Objective: To measure consumer perceptions of sustainable fashion products.
- Variables to be measured: overall liking, perception of quality, longevity
- Scales to be used: nominal, ordinal, interval, ratio

# What should be asked?

**Step 1:** Start with the research objectives which require descriptive research

**Step 2:** Determine the variables to be measured

**Step 3:** Determine the scale to be used

Example:

- Research Objective: To measure how different factors impact consumer perceptions of sustainable fashion products.
- Variables to be measured: demographics, values , buying behavior, preferences
- Scales to be used: nominal, ordinal, interval, ratio

# What should be asked?

How can the results of the qualitative research help you design the survey questionnaire?

Example:

**One of the interview questions:** What motivates you to buy a sustainable fashion product?

**Key factors from secondary data and exploratory research:** worker welfare, concerns about environment, quality.

# How to phrase? (principles)

1. Avoid using **extreme words**. e.g., all, always, best, ever, every, most, never.
2. Avoid **loaded questions**. e.g. We are happy when you like programs on Channel 7 and sad when you dislike programs on Channel 7. Let us know what you think of our programs.
3. Avoid using **ambiguous words** (be as specific as possible). e.g. How satisfied are you with our branch?
4. Avoid **double barrelled questions**. e.g. How satisfied are you with your pay and job conditions?
5. Avoid **broad questions**. i.e. What is your attitude about the link between the war on terrorism and the democrats decrying socialism?
6. Avoid **leading questions**. e.g. How do you generally spend your free time, watching television or what?

# How to phrase? (principles)

7. Avoid using **abbreviations** or **jargons**.
8. Avoid questions which are **hard to answer**. e.g., Do you recall any commercials from the program that you watched last night on Channel 7.
9. Avoid using **wrong/ambiguous** scales.
10. Avoid questions which make respondents inclined to answer **what they think** they should have done. e.g. Many people are washing their clothes less often because of concerns for the environment. How has your concern for the environment affected the way you wash clothes?

Wash less

No Change

Wash more

# How to Organize Questions

## 1. Start with screening questions or filter questions

- Determines whether the respondent fits the researcher's selection criteria.

Have you stayed at /reviewed for a hotel in the last one year?

## 2. Warm-up questions

- Use easy questions to show the respondent that the survey is easy to complete, and generate respondent interest in the survey

How often do you travel each year?

# How to Organize Questions

## 3. Use transition statements (include “skip” questions)

- Notifies respondents that the subject or question format will change. Sudden shifts in topics are to be avoided as they tend to confuse respondents.

In the following questions, we would like to ask you questions on how you rate the services of a hotel.

## 4. Section the questions for the main research objectives

- Avoid including too many questions in one section. If possible (e.g., online survey), present each section of questions or each question on a separate page to reduce fatigue.

# How to Organize Questions

5. Leave personal (demographic) and possibly offensive questions until last

- By the end of the questionnaire the respondent has developed some trust and confidence in the researcher and/or study.

Age, gender, income, BMI, marital status, etc.

6. Interdependencies: ask questions that could be affected by other questions first

Example:

- 1) Do you like Coca-Cola?
- 2) Do you know how much sugar Coca-Cola contains?

Example:

- 1) Do you know how much sugar Coca-Cola contains?
- 2) Do you like Coca-Cola?

# Layout of Questionnaire

Cover letter / Invitation letter / Consent form

- Sponsor of the study, purpose of study, format of the study, ethical issues

Main questionnaire

- Number questions, use instructions

Debrief

- A thank-you note, true purpose of the study, reminders

# Pretest a Questionnaire

## How to pre-test

- Test the reliability of measurement items
- Test the readability of questions
- Measure the time required to complete the questionnaire
- Test interdependencies (filter-questions)

## Some questions to be asked during pre-testing stage

- Can the questionnaire format be followed by the interviewer
- Does the questionnaire flow naturally and conversationally
- Are the questions clear and easy to understand
- Can the respondents answer the questions easily
- Which alternative forms of questions work best
